Algebra 1 – Q4.1_4.3 B

Name: ___________________________

4.1 – Graphing Function Rules

Find the value of y for each function rule. Show your work.

1. $y = -4x + 9$ when $x = 2$

2. $f(x) = 5x - 1$ when $x = -4$

3. $y = \dfrac{3}{2}x - 3$ when $x = 6$

Complete the table of values and graph the line.

4. $y = 2x - 5$

x	y
-2	
2	

4.2 – Understanding Slope

Find the slope. Show your work.

5. Points: $(1, -2)$ and $(7, 4)$

6. Points: $(-5, -3)$ and $(3, 9)$

Tell whether the slope is positive, negative, zero, or undefined.

7. A line falling left to right.

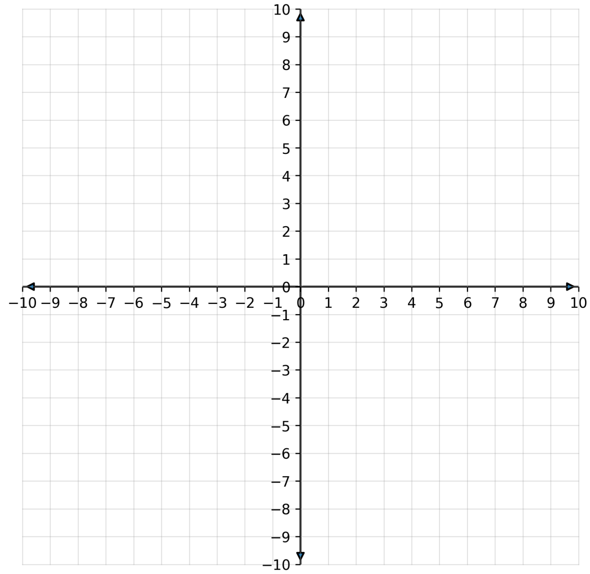
8. A horizontal line through $y = 6$.

9. A vertical line through $x = -11$.

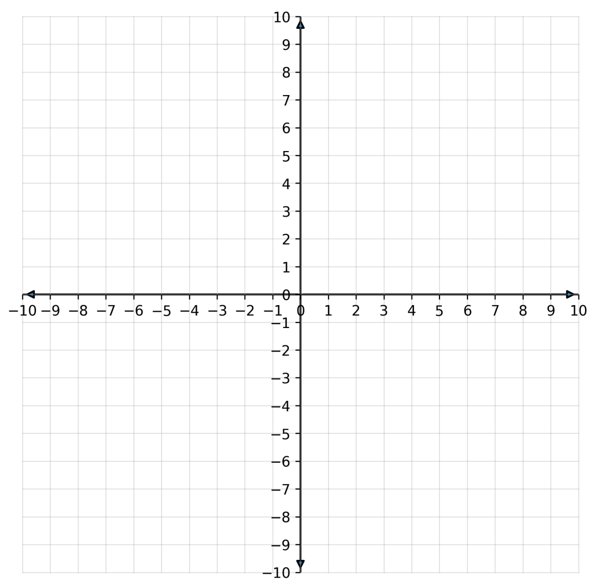
4.3 – The Equation of a Line

Graph the line using the given point and slope.

10. Through $(3, -1)$ with slope $m = \dfrac{2}{3}$



11. Through $(-2, 5)$ with slope $m = -4$



Find the x- and y-intercepts. Show your work.

12. $y = 4x - 12$

13. $5x - 10y = 20$

Real-World Problem

14. A rental shop charges a flat fee of 12 plus 3 dollars per hour for use of a bike. If you paid 39, how many hours did you rent the bike?
