

Algebra 1 – Unit 2 Test A

Name: _____

Expressions And Their Parts

1. Identify the parts of the expression:

$$5x^2 - 2x + 3$$

terms:

variables:

coefficients:

constants:

2. For the expression below, answer the questions with **true** or **false**.

$$9 - 3y + 2y^2 - 3 + 2y$$

The expression...

- a. has 4 terms. _____
- b. is in simplest form. _____
- c. is equivalent to $2y^2 - y + 6$. _____
- d. has coefficients -3 and 9. _____

Evaluating and Simplifying Expressions

Simplify each expression and then **evaluate**.

3. Simplify $5(x - 2)$.

Simplest form: _____

Evaluate when $x = 8$ (show your work!).

Answer: _____

4. Simplify $-4(2y - 5) - 2(6 - y)$

Simplest form: _____

Evaluate when $y = -3$ (show your work!).

Answer: _____

Functions

5. Use the function $f(x) = 2(x - 1) + x$ to answer the following questions.

a. Write $f(x)$ in simplest form.

Simplest form: _____

b. Find the value of $f(-3)$.

6. Does the following table represent a function? **Why or why not?**

x	$f(x)$
0	-1
8	-2
-3	-1
5	3
8	-2

Function (yes/no): _____

Why or why not?:
