

Algebra 1 – Q4.1_4.3 C

Name: _____

4.1 – Graphing Function Rules

Find the value of y for each function rule. Show your work.

1. $y = 6 - 2x$ when $x = 4$

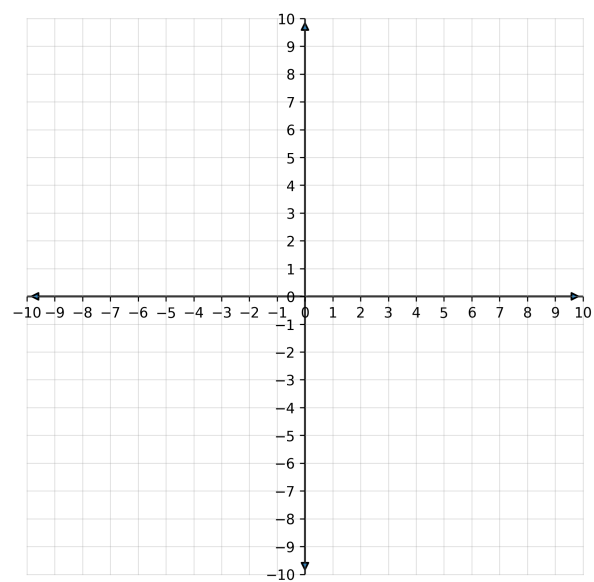

2. $f(x) = -3x + 12$ when $x = -1$

3. $y = \frac{4}{3}x + 1$ when $x = 9$

Complete the table of values and graph the line.

4. $y = -\frac{1}{2}x - 3$

x	y
-2	
2	

4.2 – Understanding Slope

Find the slope. Show your work.

5. Points: $(-2, 3)$ and $(4, -9)$

6. Points: $(5, 7)$ and $(11, 7)$

Tell whether the slope is positive, negative, zero, or undefined.

7. A horizontal line through $y = -4$.

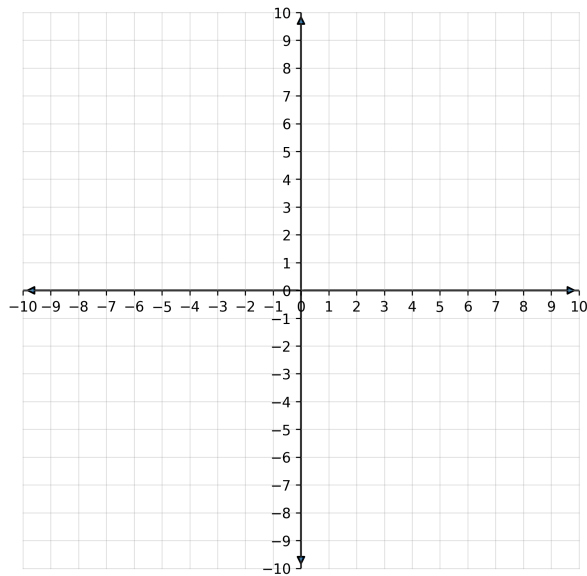

8. A vertical line through $x = 3$.

9. A line rising from left to right.

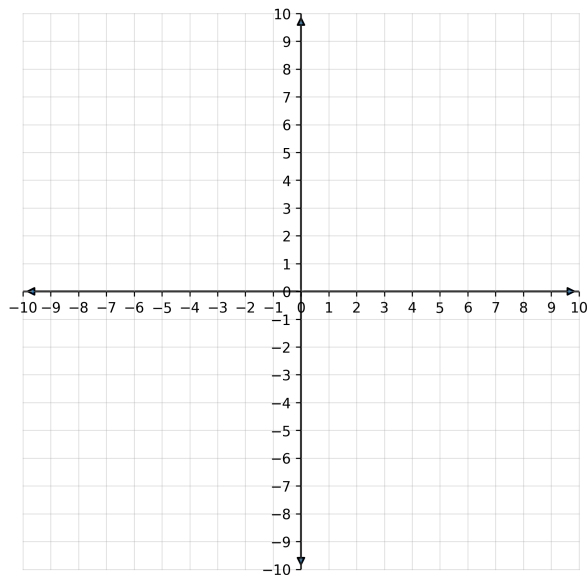

4.3 – The Equation of a Line

Graph the line using the given point and slope.

10. Through $(0, -2)$ with slope $m = \frac{5}{4}$

11. Through $(1, 3)$ with slope $m = -3$

Find the x- and y-intercepts. Show your work.

12. $y = -\frac{3}{2}x + 6$

13. $2x + y = -8$

Real-World Problem

14. A moving company charges 50 plus 15 dollars per hour of work. If your total bill was 155, how many hours did the job take?
