

Algebra 1 – Unit 2 Test C

Name: _____

Expressions And Their Parts

1. Identify the parts of the expression:

$$1 - 2r^3 - 3r + 7$$

terms:

variables:

coefficients:

constants:

2. For the expression below, answer the questions with **true** or **false**.

$$3y + 12 - 5y + 2y^2 - 3$$

The expression...

- a. has 5 terms. _____
- b. is in simplest form. _____
- c. is equivalent to $2y^2 - 2y + 9$. _____
- d. has coefficients 3, -5 and 2. _____

Evaluating and Simplifying Expressions

Simplify each expression and then **evaluate**.

3. Simplify $-2(4 - n)$.

Simplest form: _____

Evaluate when $n = 3$ (show your work!).

Answer: _____

4. Simplify $-4(2z - 3) - 5(2 - z)$

Simplest form: _____

Evaluate when $z = -2$ (show your work!).

Answer: _____

Functions

5. Use the function $f(x) = 5(3x - 1) + x$ to answer the following questions.

a. Write $f(x)$ in simplest form.

Simplest form: _____

b. Find the value of $f(-4)$.

6. Does the following table represent a function? **Why or why not?**

x	$f(x)$
0	-2
8	3
-3	-1
5	-2
8	3

Function (yes/no): _____

Why or why not?:
