

Algebra 1 – Q4.1_4.3 A

Name: _____

4.1 – Graphing Function Rules

Find the value of y for each function rule. Show your work.

1. $y = 3x - 4$ when $x = 5$

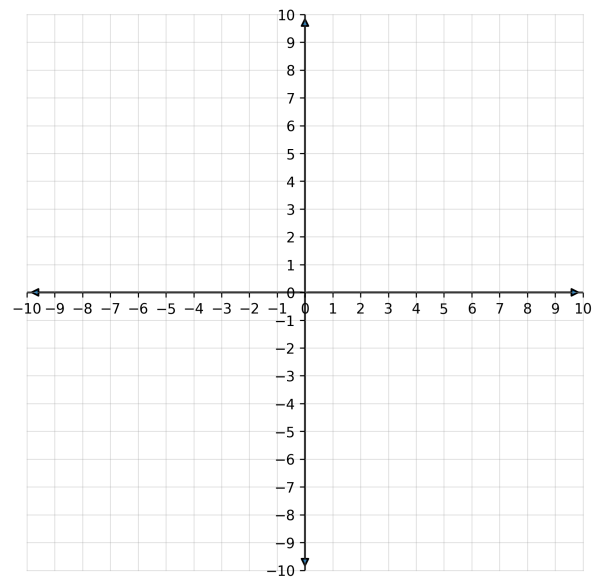

2. $f(x) = -2x + 7$ when $x = -3$

3. $y = \frac{1}{2}x + 6$ when $x = 8$

Complete the table of values and graph the line.

4. $y = -x + 2$

x	y
-2	
2	

4.2 – Understanding Slope

Find the slope. Show your work.

5. Points: $(4, 2)$ and $(10, 8)$

6. Points: $(-3, 5)$ and $(1, -7)$

Tell whether the slope is positive, negative, zero, or undefined.

7. A line rising left to right.

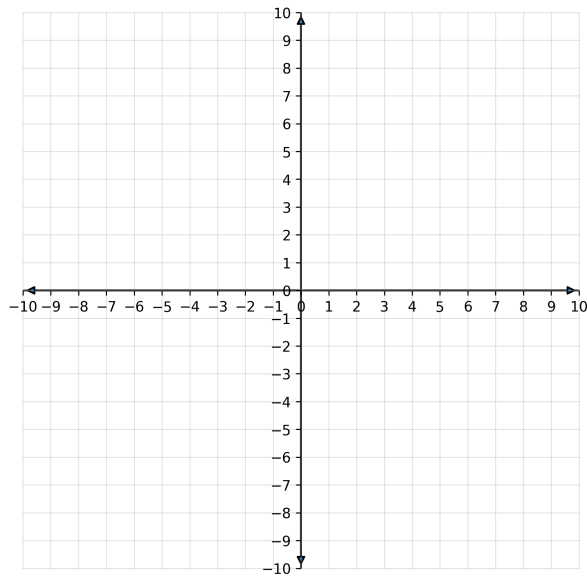

8. A vertical line through $x = -2$.

9. A horizontal line through $y = 17$.

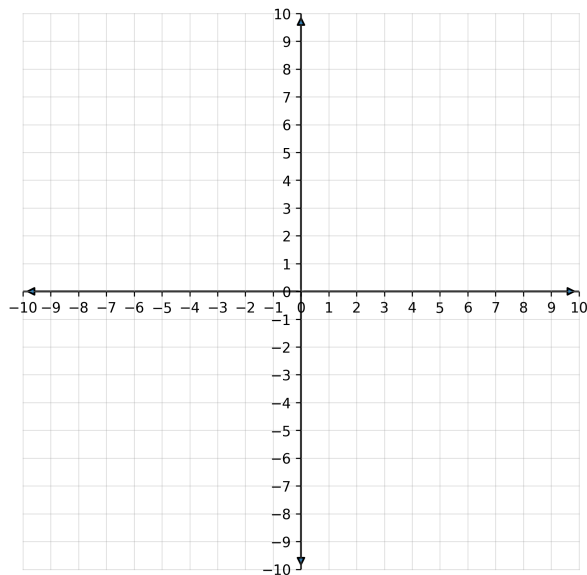

4.3 – The Equation of a Line

Graph the line using the given point and slope.

10. Through $(2, 1)$ with slope $m = -\frac{1}{2}$

11. Through $(-1, 4)$ with slope $m = 3$

Find the x- and y-intercept. Show your work.

12. $y = -2x + 10$

13. $3x + 6y = 18$

Real-World Problem

14. A phone plan costs 20 plus 5 dollars per gigabyte of data. If your bill was 65, how many gigabytes did you use?
